The method: Decimal divided by a whole number

Put the point in the quotient right above the point in the dividend.

$13.3 \div 7 = 1.9$

$133 \div 7 = 19$ divide as if there were no point

put the point straight up, 1 place from the right → 1.9

Problems 1 and 2 worked out · Version 0A

$42.8 \div 2 = 21.4$

$428 \div 2 = 214$ divide as if there were no point

put the point straight up, 1 place from the right → 21.4

$53.55 \div 5 = 10.71$

$5355 \div 5 = 1071$ divide as if there were no point

put the point straight up, 2 places from the right → 10.71
