The method: Dividing by a decimal

Move the point in the divisor to make it whole. Move the dividend point the same number of places.

$21 \div 0.3 = 210 \div 3$ move both points 1 place right

$210 \div 3 = 70$ now divide by a whole number

Problems 1 and 2 worked out · Version 0A

$36 \div 4.5 = 360 \div 45$ move both points 1 place right

$360 \div 45 = 8$ now divide by a whole number

$36.36 \div 1.2 = 363.6 \div 12$ move both points 1 place right

$363.6 \div 12 = 30.3$ now divide by a whole number
